

Substituted 4*H*-Chromene and Analogs as Activators of Caspases and Inducers of Apoptosis and the Use Thereof

5

Abstract

The present invention is directed to substituted 4*H*-chromene and analogs thereof, represented by the general Formula I:

10

15

wherein A, B, X, Y, Z and R₅ are defined herein. The present invention also relates to the discovery that compounds having Formula I are activators of caspases and inducers of apoptosis. Therefore, the activators of caspases and inducers of apoptosis of this invention can be used to induce cell death in a variety of clinical conditions in which uncontrolled growth and spread of abnormal cells occurs.
